

Account Opening Fraud Detection

Presenter: Brandon Sienkiewicz

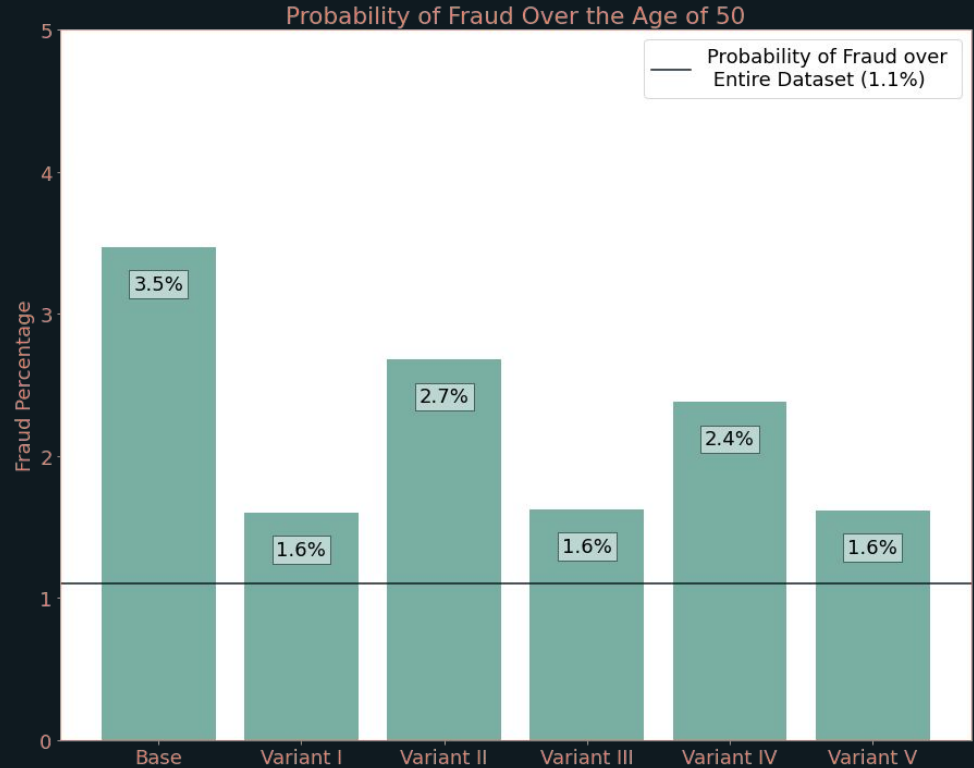

Objectives

- Relevancy
- Model Predictions
- Uses and Shortcomings

The Data

- 6 Data Variants
 - Separability/Group Size
 - Disparity
- Two Groups (Under/Over 50)
- Split Temporally

The Process

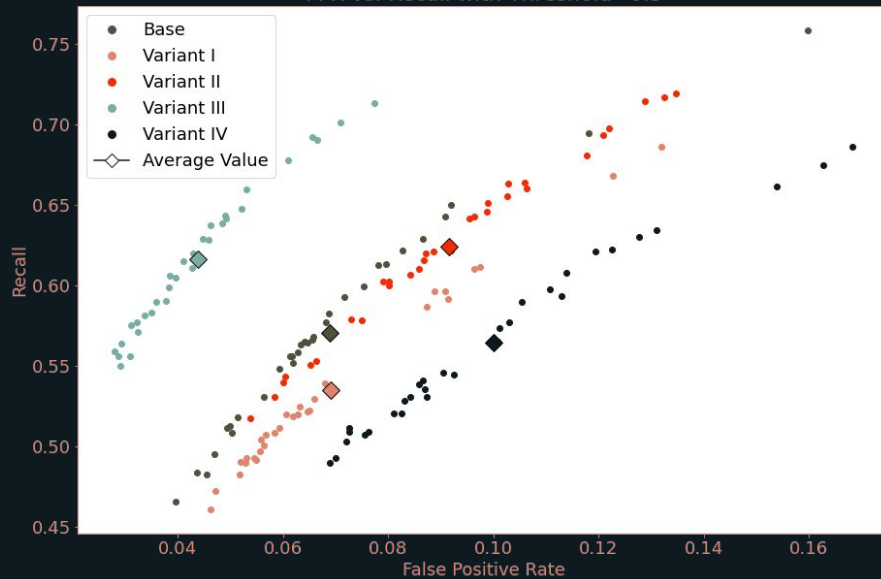

- Deep Learning Neural Network
- Self-Normalization
- Exclusion: Variant V

Performance

FPR and Recall per Threshold Value

FPR vs. Recall with Threshold=0.5

Application

- Initial fraud screening
- Fraud analyst utilization

Shortcomings

- Limited time
- ML techniques
- Protected attributes

Thank you for your time

Brandon Sienkiewicz
